

Is Your Home Protected Against Leaks?

With so many details to attend to while building your new home, it is easy to overlook the items that are not visible once the home is finished. You have spent hours choosing your exterior finish type, paint colors and other upgrades.

What about what is going under your exterior finish? Will your house wrap provide the resistance to air leakage and moisture protection you expect for your new home?

House Wraps in Home Building

Traditional house wraps are supposed to protect your home from air leakage and moisture damage but often fall short. Because they are applied in sheets that overlap and are stapled or fastened to the inner sheathing of a house, they do not provide a continuous barrier of protection.

Holes and tears caused by the fasteners can let air leak into your home, which leads to drafts, air leakage and increased energy costs. Gaps from incorrect overlapping can cause serious breaches and permit moisture to collect behind your exterior. This can lead to moisture damage and increase the threat of dangerous mold growth.

House wraps can weaken at holes or lapping errors. During construction, wind gusts and rain water can pull house wraps away from the home's sheathing, leaving it more vulnerable to damage before the exterior finish even goes up.

Once faulty house wrap is finished over, you may be left to live with an under performing exterior, higher energy costs, and leaks that can damage your home.

A sight no homeowner wants to see

stretched or torn staple holes start leaks that may never finish

StoGuard™ Holds Up. No Tears, No Gaps, No Worries.

StoGuard is a seamless spray-on house wrap that provides superior protection against moisture intrusion and air leakage.

- **Structural Shield**
Because StoGuard is sprayed directly onto your sheathing it becomes a part of your home's structure creating a smooth uninterrupted waterproof air barrier. No gaps!
- **Uninterrupted Protection**
It provides continuous coverage of your home's sheathing without the penetrating nail or staple holes of typical house wraps. It can not tear away. This advantage will improve your indoor comfort and reduce energy costs.
- **Simple Application**
With StoGuard there is no chance of lapping errors, common in mistake-prone house wrap application.
- **Sheathing Safeguard**
During construction StoGuard protects your exposed sheathing. No worries about later mold growth after you have moved in.

Talk to your home builder about upgrading to **StoGuard™** - the superior waterproofing air barrier that holds up.
