

5 Before Choosing Your Next Air Barrier or Building Wrap Product

Facts Every Contractor Should Know About Sto

StoGuard™ provides the only spray-on air and moisture barrier product for stucco or synthetic stone that has a built in release property to prevent stucco or synthetic stone base from bonding to it.

Sto EmeraldCoat® is specially formulated for use behind stucco without a slip sheet when used over gypsum sheathings or where permitted by local code authorities over wood-based sheathings.

Sto has the only stand alone ICC code report for weather resistive barriers of major brands in the EIFS industry.

StoGuard has undergone rigorous testing for the International Code Council – Evaluation Service and the Canadian Construction Materials Council (CCMC) to confirm its durability. Research conducted for CCMC and other institutions has shown that “StoGuard has proven to be an extremely durable waterproofing and air barrier material with exceptional drainage performance.”

More face-to-face time with three times as many company reps as the nearest EIFS or stucco competitor.

We offer superior support with our experienced staff, phone help lines, online help desk, and online FAQs. For less downtime, more than 80 percent of our technical inquiries are answered in the same day. When you need an answer, you don't need to wait.

Best tools to make your work easier.

- Standard or custom samples shipped in two days
- Plan reviews by 20+ years experience technical staff
- 14 AIA continuing education courses, including 2 online
- StoStudio custom rendering service available
- Over 300 CAD and Canvas detail drawings
- Dew Point analysis
- Electronic Submittal System
- Top rated website for fast access

Unlike house wraps, StoGuard is waterproof, tear proof and structural.

Because StoGuard is permanently adhered to sheathing, it becomes a part of overall physical structure. There is no tearing or gapping between StoGuard and the sheathing, only smooth uninterrupted coverage. This structural characteristic allows StoGuard to outperform sheet building wraps.

- ✓ With SMT (StoMachine Technology) technology, not only can you complete jobs 25% faster, you can also save up to 25% on overall job costs for improved profitability.
- ✓ Sto has SMT on-site equipment start-up support and training for smoother transitions to the spraying process.
- ✓ Be confident and assured with our SMT technical support hotline for minimizing any downtime due to machinery issues.
- ✓ As a stable privately held company, you can be assured that we will be here when you need us.

StoGuard™ is easier to install.

The StoGuard assembly of products is easier to install than sheet wraps and does not require highly skilled labor. StoGuard installs easily by paint, waterproofing or EIFS/stucco contractors without special training. Sto Gold Coat and Sto EmeraldCoat can be applied with an airless sprayer, roller or brush for the same smooth continuous protection. The gold or green product color makes application inconsistencies easy to identify.

Unlike some solvent-based materials, StoGuard has low VOCs and is non-toxic. No additional breathing apparatus or special handling is necessary.

The More You Know Sto The Less You'll Use Anything Else
