

Building with conscience.

Stolit[®] HDP[®]

Hydrophobic textured wall finish

Facades

Interiors

Stolit[®] HDP[®] provides an enhanced hydrophobic finish that repels water, keeping walls cleaner longer and providing greater protection against algae and mildew without sacrificing design possibilities.

Stolit HDP is an acrylic-based exterior or interior decorative and protective textured wall finish with enhanced hydrophobic properties. By maintaining more spherical water-beading, Stolit HDP allows the walls to stay clean and retain its color longer than traditional finishes. Stolit HDP also creates almost limitless possibilities for designers. It is available in four textures, or can be applied using any StoSignature[®] application techniques, providing a great deal of aesthetic flexibility. When looking for water repellency performance, ranging from a basic level all the way to super hydrophobicity, Sto's product offering is unmatched by the competition.

Stolit HDP

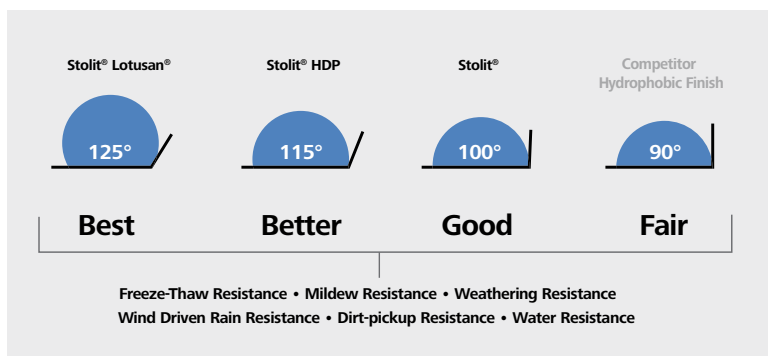

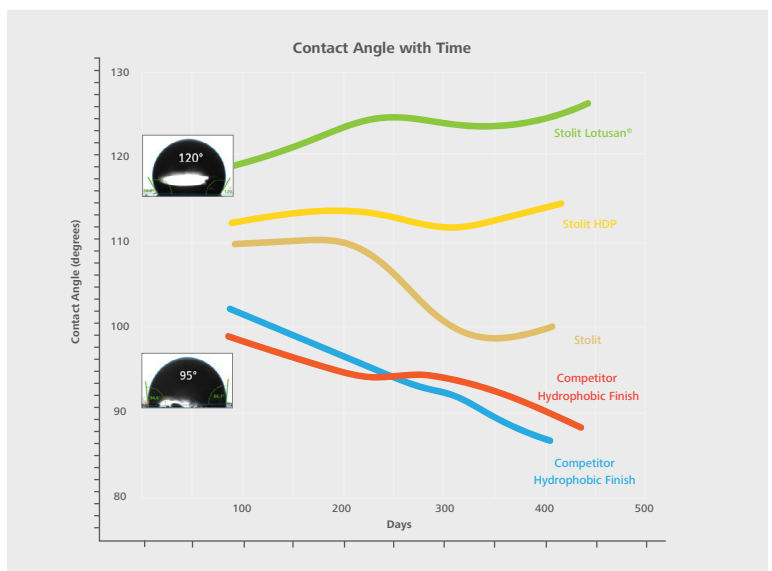

Repels Water. Retains Beauty.

Stolit HDP looks great going on and keeps walls looking stunning. Because the finish maintains a higher contact angle water-bead, the finish surface is less exposed to moisture, resulting in decreased dirt pick-up and microbial growth. In addition, less water soaks into the surface, leading to better resistance to the freeze-thaw cycles, dirt-pickup and mildew. Not only does Stolit HDP provide impressive levels of facade protection while beautifying the building, it saves on long-term maintenance and recoating costs.

Compatible with a variety of Sto engineered wall claddings systems, Stolit HDP can be used in a wide range of applications. The enhanced polymer technology spreads and floats easily. The low VOC, low environmental impact, non-toxic formula contributes to improved Indoor Air Quality (IAQ).

Features	Benefits
Hydrophobic	Repels water; resists wind-driven rain, keeps wall cleaner longer; superior resistance to dirt and air-borne pollutants
Enhanced algae and mildew resistance	Reduced maintenance costs: increased cycle time between recoats
Enhanced polymer technology	Spreads and floats easily
Vapor Permeable	Allows substrate to breathe naturally
Integral Sto High Performance Colorants	Excellent fade resistance
Water-based	Safe, non-toxic; cleans up with water
Low VOC	Low environmental impact; improved Indoor Air Quality (IAQ)
