

Building with conscience.

Columbia Basin Health Association (CBHA) Pasco MDC

The CBHA wanted to use glass in a dramatic way in the lobby of their new medical facility that would reinforce their brand and make a lasting impact on visitors.

Facades

StoVentec® Glass Panels provided the design versatility to achieve a precise brand color match while also delivering the striking visual impact the client envisioned.

Glass in interior environments brings modern sophistication and high cleanability, qualities especially important in healthcare settings. When used strategically, it also creates a bold architectural statement. As CBHA began work on a new healthcare facility in Pasco, Washington, that's exactly what they were after. A solution that blends high aesthetic appeal with high-end performance, StoVentec® Glass Panel was the perfect choice for the project.

Sto was able to match their exact shade of orange required, ensuring the final installation perfectly aligned with the association's brand identity.

A Bold Brand Statement

In a world full of visual noise, organizations are seeking new ways to reinforce their brand through the built environment. In the early planning stages of a new medical facility, CBHA felt there might be an opportunity to make a brand statement via design accents. After reviewing options with their architects, they decided they wanted to make that statement with floor-to-ceiling glass encasing the elevator shaft in the first-floor lobby. Glass is timeless, easy to clean, and presents as clean, which is essential in a healthcare environment. Fortunately, the architect was familiar with many of Sto Corp.'s products and systems and knew that the company offers industry-leading glass solutions for interior and exterior facades. They reached out to Sto to help make the vision a reality.

StoVentec® Glass

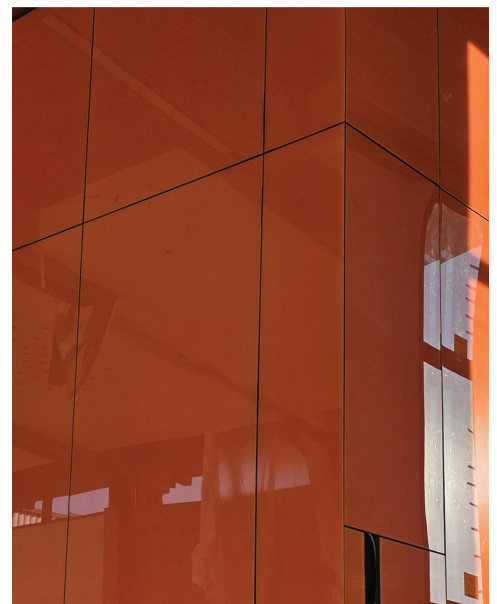

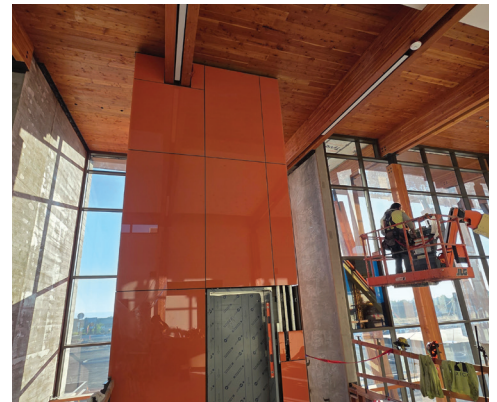

After meeting with Sto representatives, the team quickly learned that their glass dreams were achievable with one of Sto's most popular products: StoVentec® Glass Panel.

StoVentec Glass Panels are available in a broad range of panel sizes, colors, and finish options, including fully customizable back-painted glass. For interior applications like this project, the system consists of glass-faced composite panels installed over StoVentro™ engineered sub-construction for precise alignment and clean visual lines. For exterior use, StoVentec can also be provided as a fully integrated, engineered assembly that includes, air and moisture protection, continuous insulation, and sub-framing components. For CBHA, Sto was able to match their exact shade of orange required, ensuring the final installation perfectly aligned with the association's brand identity.

A Training Field Trip

Sto's technical team is always ready to provide support throughout the design and construction process. While the installers, Axiom Construction and Consulting, were very familiar with Sto's rainscreen products, they had never installed their glass panels. To ensure installation precision and minimize onsite risk, the Axiom team traveled to Sto's North American headquarters in Atlanta, GA for hands-on installation training.

The training included in-depth instruction on StoVentro's adjustable bracket and rail sub-construction system used to mount StoVentec® Glass Panels. The foreman and general foreman from Axiom were introduced to the broader StoVentec portfolio, the render, the glass, and the fiber cement systems, and received hands-on training to safely maneuver large panels in tight spaces. Before training was complete, the team would build a complete glass wall in the training facility. By the time they left, they felt confident and were ready to begin the install.

A Tricky Install

While the training educated the Axiom team on how to properly install the system, the complexity of the install was something they hadn't expected. Several skywalks converged at the elevator. Handrails on the adjacent stairs also limited the space around the elevators. These considerations left the team with less than 2" of clearance to maneuver the glass panels. Even transporting the glass panels into the lobby

"The whole process from field measurements to installation was seamless."

Shawn Hanna | Axiom Construction and Consulting

through the curtainwall on the front of the building was delicate. Once they made it into the building and guided it into the 2" gap, they had to build a 40' wall of 6' glass panels stacked end-to-end. To call it a tricky install is an understatement.

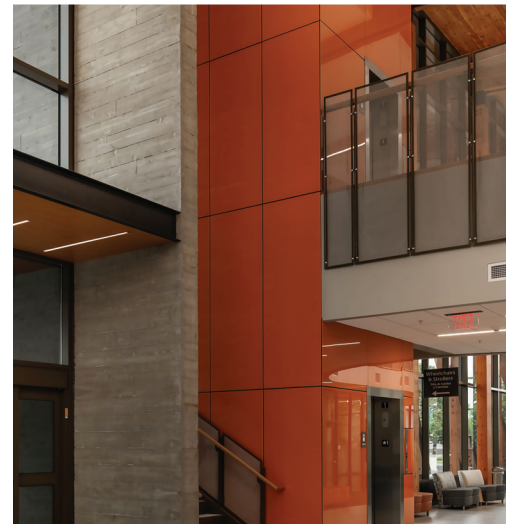

Fortunately, a scissor lift combined with the hands-on training at Sto resulted in a smooth, uneventful installation. While Sto had offered onsite support, the Axiom team felt they had everything under control.

"The whole process from field measurements to installation was seamless. We had great communication with Sto, so there were no question marks on our side. They took great care of us." Shawn Hanna, Axiom Construction and Consulting.

A Glass Act

In total, 1,380 sq. ft. of StoVentec Glass Panels were installed, delivering a bold, brand-centric visual feature that anchors the lobby. Axiom received Kudos from the owner's group and the foreman for the craftsmanship on the install. The towering orange glass is a focal point in the lobby that is certain to make an impression on every visitor. The Columbia Basin Healthcare Association couldn't be happier with the finished product.

The Confidence to Follow Your Vision.

With Sto, your creative exploration can take you anywhere. Our proven products give you unmatched freedom and the ability to achieve your vision in any color, any form, any texture, any material.

StoVentec Rainscreen systems provide a wide range of aesthetic options and price points from glass, to stone, wood, mosaic and any combination in between. They bring form together with function in a complete, single source system, allowing you to create wall systems that are visually stunning, durable and thermally efficient. Imaginative design using StoVentec Glass, with the smooth, hard, reflective look of glass, can be accentuated with an adjacent StoVentec Render system. Featuring a wide range of color and texture options, StoVentec Render extends design possibilities, and helps you create a look that is uniquely appealing.

Creativity Begins. **Sto Finishes.®**
