Glass sets a precedent

Children should feel at home where they learn. This is not only the opinion of András Pető, on which “Learning with therapeutic support” is based and practiced in the School, Boarding School and Conductive Education Centre. It is also the opinion of the RPM Architects’ office, which designed the building with this requirement in mind. Especially eye-catching are the colorful facades of the building complex that beautifully incorporate a StoVentec® Glass Rainscreen® system: whilst the translucent surfaces shimmer in green and blue, the opaque parts shine in yellow, orange, and red. A friendly and cheerful atmosphere where the children feel at home is created by this mixture of materials and colors.
