# 338 Euston Road

**StoVentec® Glass demonstrates beauty and versatility in interior application**

Facades

Interiors

The Euston Road office restoration showcases Stoventec® Glass in order to deliver an impressive visual impact that matches the high quality of the businesses within. Pre-fixed brackets and rails made the installation extremely fast and allowed for flexibility when fixing the system to the existing structure.

338 Euston Road showcases the versatility of StoVentec Glass in an interior project that reflects on the benefits of the glass panel system. The dramatic office restoration required a reception lobby that created a stunning visual impact, reflecting the quality of the businesses within.

Daniel Cruddace, Associate Architect at Sheppard Robson, said: "The existing building was initially re-clad in the early 1990's by Sheppard Robson. Client British Land then appointed Sheppard Robson to review options to update the building's office lobby and communal areas with a coherent and striking design that reflected their wider estates development."

"As architects, we constantly research industry developments. We have an award-winning interior design team who keep up to speed on quality interior products and advise throughout the design process. We looked at a range of materials of various qualities, light, coloration and several glass products. In this instance, StoVentec Glass matched our requirement. It provided the necessary high visual impact at the building entrance, giving the space the presence required on Euston Road."

**"The system produces a fantastic effect and has a highly serviceable glass finish that is easy to install and maintain. We would definitely use the system again."**

**Adrian Buckmaster | Aztec Solutions**

Applicator, Adrian Buckmaster of Aztec Solutions, comments: "This installation marked the first time StoVentec Glass had been used for an interior project in the UK, a first for Aztec and a first for Sto."

"The StoVentec application employed a highly flexible support system that held the glass panels to the wall and allowed for flexibility in fixing the system to the existing structure. All brackets and support rails were pre-fixed to the glass panels so site installation was extremely fast."

"The glass panels incorporated pre-designed screen printing with numbers indicating floor levels and cut outs for services, e.g. lifts and switches. The system produces a fantastic effect and has a highly serviceable glass finish that is easy to install and maintain. We would definitely use the system again."

StoVentec Glass can be used as an exterior rainscreen cladding system, or as an interior decorative option. The glass panel is manufactured to meet a range of colors and size requirements, with RAL color and screen-printing options available.

## The only limit is your imagination

Inspiration favors the open mind. With Sto, your creative exploration can take you anywhere. Our proven products give you unmatched freedom and the ability to achieve your vision in any color, any form, any texture, any material.

StoVentec rainscreen systems provide a wide range of aesthetic options and price points from glass, to stone, wood, mosaic and any combination in between. They bring form together with function in a complete, single source system, allowing you to create wall systems that are visually stunning, durable and thermally efficient. Imaginative design using StoVentec Glass, with the smooth, hard, reflective look of glass, can be accentuated with an adjacent StoVentec Render system. Featuring a wide range of color and texture options, StoVentec Render extends design possibilities, and helps you create a look that is uniquely appealing.

Creativity Begins. **Sto Finishes.**®
