

Holiday Inn, LAX

Shakespearean Tragedy No More Thanks to Continuous Insulation

Holiday Inn at LAX Airport in Los Angeles had the beautiful Old Style Romeo and Juliet balconies and partitions, and were tragic, just like the Shakespearean play they are named after. The balconies and partitions on the north and south elevations were removed, then a Sto fluid-applied air and moisture barrier was applied to protect against air leakage and moisture intrusion. Over that, a new continuous insulation system was applied. The east and west elevations of CMU were not in as dire condition and were power washed, the cracks repaired and prepped for a smooth primer and an acrylic based coating to protect against the environment. Sto worked with the design team from the beginning to ensure a beautiful, durable result.

- Sto Products: - StoGuard®
 - StoTherm Classic NEXt®
 - Sto Primer Smooth
 - Sto Flexible Crack Filler
 - StoCoat® Acryl
