

Lawndale Terrace Apartments

Permanent Fix to Keep Building Clean and Beautiful for Years to Come

The Lawndale Terrace apartment building in Chicago, IL was experiencing chronic water leakage, which resulted in continued interior drywall replacement. The 198 unit, 13-story subsidized housing building needed a permanent fix. Sto Corp. came in to completely remove the existing EIFS. Then a Sto fluid-applied air and moisture barrier was applied over brand new glass mat gypsum sheathing to protect the building against air leakage and moisture intrusion. Finally a new EIFS system, with a special super hydrophobic textured finish, was applied that will keep the building clean and beautiful for years to come.
